

Sanakin Patient Information Guide

What is Sanakin Therapy?

Sanakin Therapy is a modern regenerative treatment using your body's own anti-inflammatory proteins. A small blood sample is processed to create Autologous Conditioned Serum (ACRS), rich in healing cytokines that reduce pain and support tissue repair.

How It Works

1. A small blood sample is drawn.
2. The sample is incubated to stimulate healing proteins.
3. The serum is extracted and injected into the affected area such as joints, spine, or tendons.

Conditions Sanakin Treats

- Osteoarthritis
- Tendon injuries
- Sports injuries
- Chronic joint pain
- Spinal inflammation
- Soft tissue damage
- Post surgical recovery

Benefits

- Reduces inflammation naturally
- No chemicals, additives, or steroids
- Longlasting relief
- Faster tissue healing
- Improves mobility and function
- Safe and well-tolerated

Why Choose CortexCure?

CortexCure is one of the UK's certified Sanakin providers. Our specialists deliver advanced diagnostics, personalised treatment plans, and high quality care using the latest regenerative technologies.
